GLACE

GLACE

GLACE is a fixture that gives a “floating” effect to a shelf. GLACE consists of two fittings in stainless steel for mounting on a wall. Tempered glass or the material of your choice can be used for shelves. GLACE reflects an aesthetic simplicity in design that accentuates the objects on the shelf.

GLACE components are available to fit three widths, 20, 25 and 30 cm.

You can choose the desired length of individual shelves to rest on GLACE fittings. 8-mm tempered glass shelves are but one example. Other materials may be chosen, plexiglass, plastic, wood.

ORDERING SHELVES

Shelving can be ordered from your local supplier. When ordering GLACE and shelves, keep in mind that there should be a maximum of 80 cm between fittings for an 8-mm-thick glass shelf.

GLACE 20 – SHELVES 20 CM WIDE X 8 MM THICK X 80 CM LONG

GLACE 25 – SHELVES 25 CM WIDE X 8 MM THICK X 80 CM LONG

GLACE 30 – SHELVES 30 CM WIDE X 8 MM THICK X 80 CM LONG

ADDITIONAL GLACE UNITS CAN BE ADDED FOR LONGER SHELVES.

BUG SYSTEMS can deliver total solutions in various materials. Please contact us.
